We purchase five futures contracts (each 100 ounces) for the delivery of 500 ounces of gold in December. Therefore, our daily gain is 500 times the change in futures price of one ounce. The initial margin is $5 \times 6000 = 30,000$. A margin call will happen when our initial margin falls below \$22500. Our initial bank balance is \$1,000,000. We put up \$30,000 initial margin, so the bank will be \$970,000 at the end of day one.

Day	Trade Price	Settlement Price	Daily Gain	Cumulative Gain
